EXCEL HOMEWORK #1

I. Formulas and Conditional Formatting (20^{pts})

- Open the file *Problem1.xlsx*
- Calculate the HW Average (items HW1-HW6) with 1 decimal place, i.e.: 18.0 (2^{pts})
- Fill in the Bonus Point column for each student based on their attendance with the following rules: (5^{pts})
 - Attend 8 or 9 lectures: bonus 0.4 points
 - Attend 6 or 7 lectures: bonus 0.2 points
 - Attend less than 6 lectures: bonus 0 point
- Calculate the Course Grade using the given formula with 2 decimal places: (2^{pts})
 - Course Grade = HW Average*0.3 + Midterm Exam*0.3 + Final Exam*0.4 + Bonus
- Use *Conditional Formatting* to highlight (*Light Magenta Fill with Bold Brown Text*) top-6 students who got the highest scores (3^{pts})
- Use *IF* and *CONCATENATE* functions to fill the Scholarship column the text "*Awarded Scholarship*" for students who got the Course Grade greater than 19.0, others leave the field empty (3^{pts})
- Use *VLOOKUP* function to fill in the table below the given data (5^{pts})

II. Basic Chart (10pts)

- Open the file *Problem2.xlsx*
- Plot a diagram like Figure 2 below in a new worksheet which names Brigham Corp. Expenses
- Chart type: Bar of Pie, chart style: 11, text font: Times New Roman

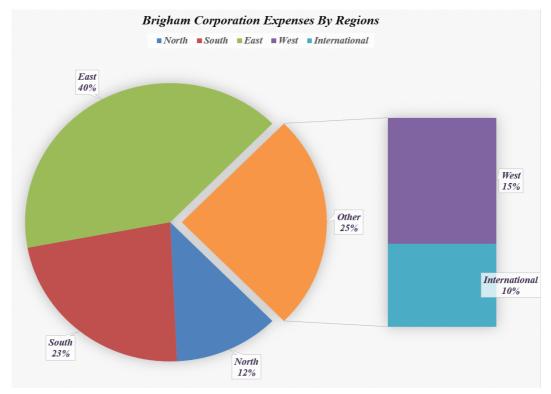

Figure 2. Brigham Corporation Expenses By Regions

III. Trend-Line (10^{pts})

- Open the file *Problem3.xlsx*
- Plot a scatter diagram in a new worksheet which names BalloonsSold.

- Modify each data and marker to fit with its color (for blue data, we use a diamond ◆ and for green data, we use a square, both are size: 6).
- Add the trend-line to forecast each data 3 periods in advance (trend-line type: *polynomial*, order: 4, line width: 1.5pt)
- For whole chart, use text font: *Times New Roman* as shown in Figure 3

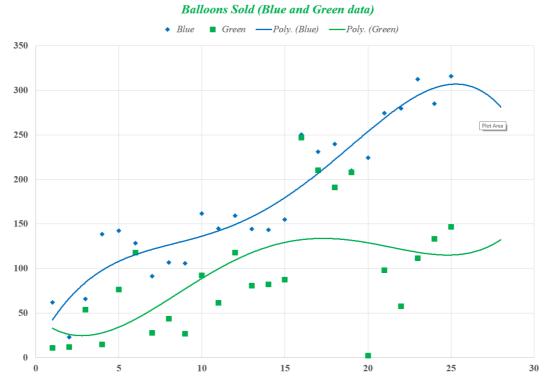

Figure 3. Balloons Sold (Blue and Green data)

IV. PivotTable and PivotChart (20pts)

- Open the file *Problem4.xlsx*
- Check the data consistency three conditions to create PivotTable (2^{pts})
- Create a PivotTable in a new worksheet which names *HotelChainPivotTable* as in Figure 4.1: (10^{pts})

Figure 4.1. Hotel Chain PivotTable

- Create a PivotChart in a new worksheet which names *HotelChainPivotChart* as in Figure 4.2: (*Total Expenditures Over Quarters For Four Departments*), use text font: *Tahoma* (8^{pts})

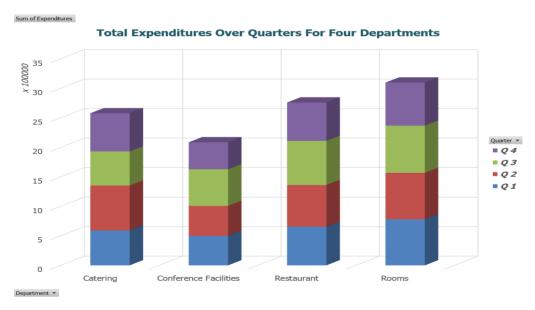

Figure 4.2. Hotel Chain PivotChart

V. Sorting and Filtering Data (5^{pts})

- Open the file *Problem5.xlsx*
- Apply quick filters to find out all students stated as Hispanic population (Ethnicity column has a value *H*) who have R-MSS in Top 50% and W-MSS less than 725 (176 records found).

VI. Validating Data (5^{pts})

- Open the file *Problem6.xlsx*
- Use Data Tools to remove duplicate data in List of Discoverers column
- Use *Data Validation* to circle all cells of column C (*Discoverer*) that do not belong to the list (*List of Discoverers*)

VII. What-If Analysis – Scenario Manager (10^{pts})

- Open the file *Problem7.xlsx*
- The manager of the restaurant plans to make some changes as follows:
 - Recruit 3 more staff in Kitchen
 - Increase Renting amount (Overhead) up to \$5,000
 - Increase Average hourly rate for Clean up staff to \$8.35
 - Decrease Supply amount to Kitchen down to \$28,000
- Create a scenario to see how these changes would affect on the monthly expense (*create a summary*)

VIII. What-If Analysis – Goal Seeking (5^{pts})

- Open the file *Problem8.xlsx*
- Currently, the restaurant spends annually \$1,221,600.00. However, the manager wants to decrease this spending down to \$1,150,000.00 each year.
- Use *Goal Seek* to find out what is the *Supply Amount* to kitchen department that you would pay to achieve the financial target the manager had set. Explain the result that you find.
